

LET YOUR WORK FLOW

Interoperability Lab

We understand that in order to build quality storage solutions that meet vertical market applications, you must first understand customer workflow and then mirror it internally prior to deployment. Scale Logic has invested over \$1M for industry specific applications and network infrastructure to create a fully functioning media centric interoperability lab.

Our interoperability lab is multi-functional which allows our development team, ISP and OEM Channel Partners access for proof of concept, benchmarking, development, and testing.

- **Over a petabyte of storage ranging from SSD, SAS, iSCSI, 8/16Gb Fibre channel, 1/10Gb Ethernet and Infiniband**
- **Storage platforms include: Block Level SAN, Scale-Out NAS, SAN appliances, NAS and Archive**
- **Over 50 M&E applications such as Avid, Apple, Adobe, Telestream, Black Magic, AJA, Levels Beyond and many others**

In support of our modular approach we analyze and test all parts of the process with road map and feature enhancements. This provides valuable data to our OEM partners and software engineers that influence future releases and versions of our complete line of products and services.

Benchmarking

Once development meets the required performance, benchmarking takes place. Internal test programs developed over the last 20 years guarantee application specific requirements are met when the solutions are deployed.

Interoperability

Performance is just the beginning to vetting out solutions for complicated workflows. Interoperability testing allows our team to feel comfortable that converged solutions are integrated based on strict guidelines including OS versioning, drivers, connectivity, servers, workstations, and applications.

Proof of Concept

Our internal team and customers utilize the lab to do their own proof of concept testing. In the M&E industry very few workflows are the same, allowing customers access to the lab allow them to try several types of technology to ensure confidence in the investment.

Support

Our team has over 30 years of experience deploying solutions into the M&E industry. We fully understand what works in the lab may not completely translate into integration. By being able to replicate customer issues in house vs. at their facility, we can arrive at a resolution much faster thereby limiting downtime and impact to the customer.
