Scale Logic's Interoperability Lab qualifies Adobe Creative Cloud with the Genesis Platform and enterprise solutions from NetApp, HPE and Hitachi

Bloomington, Minn. – Sept. 6, 2017 – Scale Logic announced today it has invested more than \$1 million in industry-specific applications and network infrastructure to create a fully-functioning, media-centric interoperability lab. The multi-functional lab will enable creative professionals the ability to create and test across different technologies, in order to understand customer workflow and mirror it internally prior to deployment.

“In the media and entertainment (M&E) industry, very few workflows are the same, so allowing customers access to the lab allows them to try several different types of technology to ensure confidence in their investment. Our customers will be able to collaborate at unprecedented levels and the ability to mix and match tools to fit their workflow needs and budgets,” said Daryl Heinis, chief technology officer for Scale Logic.

Interoperability testing ensures that converged solutions are integrated and based on strict guidelines, including OS versioning, drivers, connectivity, servers, workstations and applications. The lab integrates more than 75 M&E workflow and editing applications, including Adobe's Premiere, Telestream's Vantage, Levels Beyond's Reach Engine and others, and utilizes various storage platforms: Block Level SAN, Scale-Out NAS, SAN appliances, NAS, and Archive.

“One of the lab's most valuable features is the 24/7 access it allows for M&E partners, editors and end-users around the world to test the differences in SAN, NAS, Scale-Out NAS and other associated technologies,” Heinis continued. “It has allowed Scale Logic to bring a more educated decision-making process to our customers and partners.”
